Case Processing Summary

	N	Percent
Included	1726	100.0%
Excluded	0	0.0%
Total	1726	100.0%

Model Summary

Target	Duration
Probability Distribution	Normal
Link Function	Identity
Information Criterion Akaike Corrected	1796.050
Bayesian	1806.930

Information criteria are based on the -2 log likelihood (1792.043) and are used to compare models. Models with smaller information criterion values fit better.

Coefficients of Determination

Pseudo-R Square	Marginal	.020
Measures	Conditional	.056

Intraclass Correlation Coefficients

Overall ICCs	Adjusted	.037
	Conditional	.036

Covariance Parameters

Covariance Parameters Summary

Covariance Parameters	Residual Effect	1
	Random Effects	1
Design Matrix Columns	Fixed Effects	28
	Random Effects	23 ^a
Common Subjects		23

Common subjects are based on the subject specifications for the residual and random effects and are used to chunk the data for better performance.

- a. This is the number of columns per common subject.

Residual Effect

Residual Effect	Estimate	Std. Error	Z	Sig.	95% Confidence Interval	
					Lower	Upper
Variance	.157	.005	29.040	<.001	.147	.168

Covariance Structure: Scaled Identity
Subject Specification: (None)

Random Effect

Random Effect Covariance	Estimate	Std. Error	Z	Sig.	95% Confidence Interval	
					Lower	Upper
